

# A very quick introduction to HPC

(HPC = High Performance Computing)

Lucy Whalley // [lucydot.github.io](https://lucydot.github.io)

# Who am I?

- My name is Dr Lucy Whalley
  - Vice-Chancellor's Fellow in Physics at Northumbria
  - Member of the EE Faculty HPC steering group
  - I use HPC for my research in solid-state physics
- (HPC = High Performance Computing)

# Quantum mechanical vibrations

Questions

## Why use HPC?

### Research problems can outgrow the computer where they started

- Statistical validation – running the same model 1000 times, each time takes an hour
- Increase in dataset size – the new data is 10 times as large and will crash a laptop
- Increase in model complexity – going from 2D to 3D simulations leads to a large increase in simulation time

Supercomputers (also known as clusters) are optimized for intensive computing

This calculation would take 24 days on my laptop (and would really slow down Netflix-Teams meetings)

## Why use HPC?

### Using a cluster has several advantages

- **Speed** – clusters have *\*lots of\** cores
- **Volume** – processing memory (RAM) and disk storage for large amounts of data
- **Efficiency** – as there are many system users
- **Cost** – bulk purchasing results in a reduction in cost
- **Convenience** – why tie up your own computer for hours if you can use another one?

02

# HPC basics

What is a supercomputer?

# What is a supercomputer?

**Laptop**

2 cores

**Server**

16-128 cores

**Supercomputer**

~500 – 7.6 million  
cores

Rank	System	Cores	Rmax (TFlop/s)	Rpeak (TFlop/s)	Power (kW)
1	<b>Supercomputer Fugaku</b> - Supercomputer Fugaku, A64FX 48C 2.2GHz, Tofu interconnect D, Fujitsu RIKEN Center for Computational Science Japan	7,630,848	442,010.0	537,212.0	29,899
2	<b>Summit</b> - IBM Power System AC922, IBM POWER9 22C 3.07GHz, NVIDIA Volta GV100, Dual-rail Mellanox EDR Infiniband, IBM DOE/SC/Oak Ridge National Laboratory United States	2,414,592			
3	<b>Sierra</b> - IBM Power System AC922, IBM POWER9 22C 3.1GHz, NVIDIA Volta GV100, Dual-rail Mellanox EDR Infiniband, IBM / NVIDIA / Mellanox DOE/NNSA/LLNL United States	1,572,480			

The path to exascale computing ( $10^{18}$  flops)

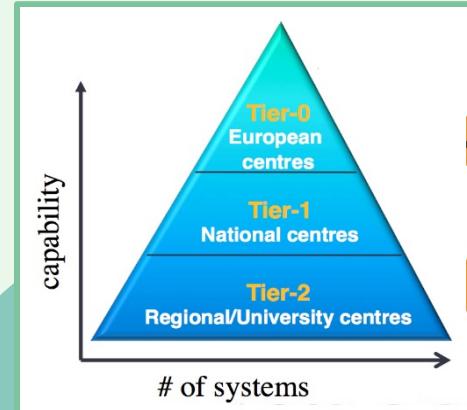

# Which computers can I access?

HPC facilities are structured according to tiers

TIER	COMPUTER	Access route
0	Multiple	Prace - ( <a href="http://prace-ri.eu">http://prace-ri.eu</a> )
1	Archer2	Multiple
2	Oswald	Raise an IT ticket

# How do I access the computer?

```
root@kali:~# ps -eo pid,ppid,cmd --sort=-rss | head -n 20
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
  1000  1000  /usr/bin/python3 /usr/share/glibmm-2.68/compile.sh --no-parallel
```

Using a terminal (just like the movies)

# How do I access the computer?

```
lucy@lucys-MacBook-Air:~/Repos/2021_MixedCation ㄿ%4
(base) → 2021_MixedCation git:(main) ✕ ssh
```

Using a terminal and Unix commands

# How are resources distributed?

A scheduler is used to manage the job queue

03

\* Finding out more

What next?

# Where can I get more support?
