

# PUBLISHING YOUR SOFTWARE PROJECT WITH THE JOURNAL OF OPEN SOURCE SOFTWARE

Lucy Whalley

[lucydot.github.io/slides](https://lucydot.github.io/slides)

# MATERIALS DESIGN GROUP @ ICL

[github.com/WMD-group](https://github.com/WMD-group)

# CASE STUDY: `effmass.py`

code: [github.com/lucydot/effmass](https://github.com/lucydot/effmass)  
research paper: [arxiv.org/abs/1811.02281](https://arxiv.org/abs/1811.02281)

## FROM THE JOSS GUIDING PRINCIPLES

*"We like to think of JOSS as a 'developer friendly' journal. That is, if the submitting authors have followed best practices (have documentation, tests, continuous integration, and a license) then their review should be rapid."*

# WHY SHOULD I SUBMIT TO JOSS?

- published paper and citations
- an incentive to learn new tools
- peer review process brings increased confidence
- good way to promote your code to the community

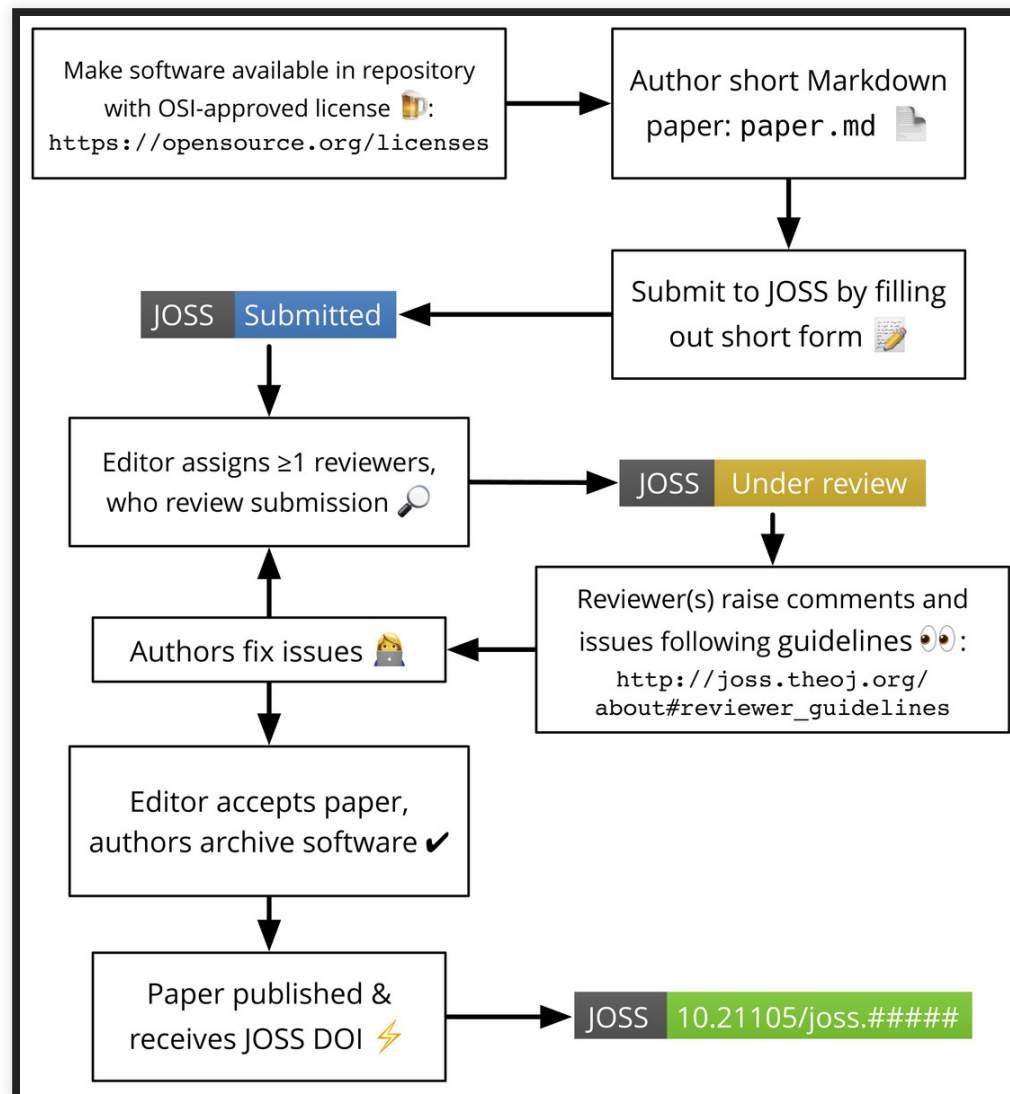

## WHY SHOULD *WE* SUBMIT TO JOSS?

- well-documented and well-tested software freely available to the research community
- reproducibility: see "[The Scientific Paper Is Obsolete](#)"

# THE JOSS SUBMISSION AND REVIEW FLOW

## A JOSS PAPER CONTAINS...

- A list of the software authors and their affiliations
- A summary describing the high-level functionality
- A statement of need
- A list of key references
- A summary of research projects using the software

# THE JOSS REVIEW CRITERIA

- Software license
- Functionality
- Installation instructions
- Community guidelines
- **Tests**
- **Documentation**

# TESTS

- **unit tests:** test individual functions
- **integration tests:** test functions work together
- **end-to-end tests:** test from start to finish

Tools: [pytest](#), [Travis CI](#), [Jupyter Notebook](#)

`efmass`: [unit tests](#), [CI](#), (manual) E2E

See [Katy Huff's Python testing workshop](#)

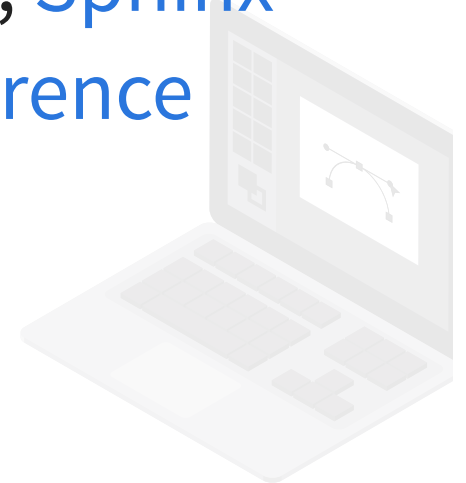

# DOCUMENTATION

- **tutorials:** how to complete a particular task
- **explanation:** background theory
- **reference:** API-documentation / command line reference

Tools: [Jupyter Notebook](#), [ReadTheDocs](#), [Sphinx](#)

`effmass`: [tutorial](#), [background](#), [reference](#)

## FINAL THOUGHTS

- JOSS are always looking for new reviewers
- Possible ways to support each other? --> workshops, code review, mentoring.
- Other relevant journals: [www.codeisscience.com](http://www.codeisscience.com)

# DISCUSSION QUESTIONS

- How can the research software community support work in the materials department?
- Which languages, software and tools do you use and why? Are there others you would like to learn/use?
- What are the main software-related challenges to your work?
